TASK 2 – DAY 4 STUDENT GUIDE

Focus: Improve your system so it is reliable and easier to use

Your Goal Today

By the end of today, you should have:

- A more **reliable system**
- Improved **user experience (UX)**
- Additional **test plan entries linked to evidence**
- Evidence of **improvements based on testing**

Important Mindset

Today is about improving your system, not adding lots of new features.

Strong students:

- improve quality

Weaker students:

- make sure the system works consistently

THE TASK 2 LOOP (Use this all lesson)

1. Improve a feature
2. Test it
3. Record in test plan
4. Link video
5. Update testing.md
6. Fix if needed
7. Retest

STEP 1 – Choose Your Improvements (45–60 mins)

Choose **2–3 improvements only**

Core improvements (everyone should do):

- Improve validation (required fields, formats)
- Improve error messages (clear, helpful)
- Improve layout (spacing, readability)

Optional (if confident):

- Add simple search OR filter
- Improve responsiveness (mobile view)

STEP 2 – Test Your Improvements

For each improvement:

You MUST:

Add to your TEST PLAN:

- feature tested
- type of data
- expected vs actual
- pass/fail

Record video evidence:

- show the improvement
- show correct + incorrect use

Update testing.md:

- short explanation of what happened

STEP 3 – When Improvements Do Not Work

If something fails:

- record it in your test plan
- explain clearly in testing.md

Then choose:

- fix now
  OR
- fix later

STEP 4 – Improve + Retest (Iteration)

If you fix something:

You MUST:

In versioning.md:

- what you improved
- why
- which test showed the issue

In your test plan:

- update result OR add retest

Record confirmation video

STEP 5 – Continue Developing Your System

You should still be developing today.

Focus on:

- making features more reliable
- making the system easier to use
- improving data accuracy

Avoid:

- starting large new features
- rushing unfinished ideas

STEP 6 – Using AI and the Internet

Same rules as Day 3:

You MUST record:

- what you used
- what it helped with
- what you changed

STEP 7 – Writing Framework (Bullet Points Only)

Add:

- what you improved
- why it was needed
- how testing helped
- what still needs improvement

EXTENSION (Higher Band Students)

Strong UX Improvements

- better navigation
- clearer layout
- improved feedback messages

Advanced Validation

- boundary checks
- format checks
- preventing incorrect data

Code Quality

- reusable functions
- improved naming
- cleaner structure

Evidence Quality

- clearer test plan entries
- stronger links between:
  - test plan
  - testing.md
  - videos

SUPPORT FOR STUDENTS WHO ARE STUCK

Focus ONLY on:

- making CRUD work consistently
- improving validation
- completing 3–5 strong tests

END OF DAY CHECKLIST

You must have:

- Improvements made to your system
- New test plan entries
- Matching testing.md updates
- Linked video evidence
- versioning.md updated
- Writing framework notes added
- AI usage recorded

Final Reminder

A simple system that works well scores higher than a complex system that breaks.
